Premium Platinum Pools

Dear Adrian,

Thank you so much for the recent River Rok application you did for our company. We are aware of the difficult working conditions created by the Fiberstar "Star Floor" fiber optic in floor lighting product used on the job, and your ability to accommodate the situation is unmatched in south Florida. Fiberstars recommends a minimum of 25% overage in fiber lenses in anticipation of the plaster crew breaking that many points. Your attention to detail and advanced preparation with your crew resulted in only 8 broken lenses, roughly 5%. The finish is impeccable, and the customer could not be happier. In addition your ability to handle all of the surface extras including the two tone beach entry with wave pattern, the abalone shell additive, and the giant rock formations was impeccable.

We look forward to working with you and your crews on all our future projects.

Sincerely,

Lawrence Simmons

President
